

## Breathable freshness. Technology that rebalances.

**Air Memory** is the result of a technological evolution of memory foam, featuring a fully open-cell structure that ensures high breathability, hygiene, and dynamic comfort. It is a washable, lightweight, and high-performance material designed to maintain the ideal microclimate during rest.

Today it is enhanced with **BioCrystal**, an innovative technology representing the new frontier of comfort. The crystals used are natural elements with a highly stable and ordered structure. Integrated directly into the foam, they create a new interaction between material and body, adding a more advanced and perceptive dimension to comfort.

**With a density of 45, Air Memory with BioCrystal combines freshness, breathability, and advanced well-being in a single solution.**

## BioCrystal: the new frontier of comfort.

**BioCrystal** introduces a completely new way of experiencing comfort.

It does not simply support the body but helps create the ideal conditions for its natural balance.

**Thanks to their properties, the crystals promote continuous interaction with the body, transforming rest into an active moment of regeneration.**

**The resulting experience is concrete and perceptible:**

- ✓ promotes deeper relaxation
- ✓ helps reduce accumulated stress
- ✓ supports physical energy recovery
- ✓ helps restore overall body balance

**BioCrystal** works constantly and naturally, without requiring any action, accompanying the body toward a new quality of well-being.

### TECH STRIP

| Density  | Structure             | Breathability | Thermal action         | Thermoregulation | Integrated technology |
|----------|-----------------------|---------------|------------------------|------------------|-----------------------|
| 45 kg/m³ | Open-cell Memory Foam | High          | Reduction of body heat | 3-6°C            | BioCrystal            |
