

The support that gives shape to comfort.

FLEXFOAM is the flexible polyurethane foam designed to ensure stability, resistance and versatility across the most diverse bedding applications.

Available in different load-bearing capacities, it represents the ideal base for the production of mattresses, supports and sleep systems that require reliability and long-lasting durability. Its structure ensures balanced and constant support, helping to maintain the product's performance even after prolonged use.

Thanks to its ability to adapt to multiple design requirements, **FLEXFOAM is one of the most widely used solutions in the construction of modern sleep systems.**

An essential technology that works silently to guarantee comfort, support and long-lasting performance.

Where the quality of rest begins

The performance of a mattress does not depend only on its surface layers. At the base of every sleep system there is a structure that determines its stability, support and durability over time.

For this reason, **FLEXFOAM** represents one of the fundamental materials in the bedding sector: a solution designed to offer constant reliability and adapt to the most diverse construction needs.

The advantages of FLEXFOAM

- ✓ stable and uniform support
- ✓ high resistance over time
- ✓ excellent application versatility
- ✓ ideal for mattress bases and structures
- ✓ constant and long-lasting performance
