

Nature and technology in perfect balance.

GREENBIORELAX is born from the union between the evolved comfort of memory foam and **ingredients of natural origin selected to enrich the formulation of the material.**

Its formulation integrates **vegetable oils derived from castor and soy** together with precious natural essences, creating a material that gently embraces the body and promotes a deep feeling of well-being.

Its viscoelastic structure progressively adapts to the body's shapes, distributing weight evenly and helping to relieve the tensions accumulated during the day.

GREENBIORELAX represents a more conscious choice, where innovation, comfort and attention to raw materials coexist in perfect balance.

Innovation meets sustainability

The search for new materials is not only about performance, but also about the way they are made. Increasingly, the bedding sector is looking toward solutions capable of integrating components from renewable sources without compromising quality and reliability.

GREENBIORELAX interprets this evolution, representing a modern approach that combines research, attention to resources and a culture of well-being.

The advantages of GREENBIORELAX

- ✓ contains castor and soy vegetable oils
- ✓ ergonomic and progressive comfort
- ✓ uniform body weight distribution
- ✓ reduction of pressure points
- ✓ natural relaxation sensation
- ✓ attention to renewable raw materials
