

Dries quickly. Breathes naturally. Resists over time.

RETICOLDRY is a high load-bearing foam characterised by a fully open-cell structure that promotes the continuous passage of air and humidity. **Extremely breathable and draining**, it has been designed to ensure comfort, hygiene and high performance even in the most demanding conditions.

Its particular structure allows water to drain rapidly, drastically reducing drying times compared to traditional foams. This characteristic makes it ideal for outdoor applications and environments frequently exposed to humidity.

Naturally resistant to the formation of mould and bacteria, **RETICOLDRY** maintains its elasticity, support and freshness over time.

Designed to live outdoors

Outdoor spaces require materials capable of facing constantly changing conditions. Sun, rain, humidity and intensive use put every component to the test, making the choice of padding essential.

RETICOLDRY was created to meet these needs, offering a reliable solution for all applications where durability, practicality and performance must coexist over time.

The advantages of ReticoldDry

- ✓ fully open-cell structure
- ✓ high draining capacity
- ✓ extremely fast drying
- ✓ maximum breathability
- ✓ resistant to mould and bacteria
- ✓ ideal for outdoor and nautical applications
