

Comfort that breathes and reacts

SUPERfresh is a high-resilience foam designed to offer dynamic, immediate and constant comfort over time. It does not retain the shape but reacts quickly to pressure, accompanying every movement of the body with elasticity and support, for an active and balanced sensation.

Made with **HR (High Resilience)** technology and in **MDI**, it combines an elastic response similar to latex with **greater stability and durability**. Its fully open-cell structure promotes continuous ventilation, preventing heat build-up and facilitating moisture dispersion.

The result is a fresh, breathable and responsive surface, capable of maintaining a dry microclimate and naturally improving the quality of rest in a constant way.

Freedom of movement without compromise

Every person experiences rest differently. Some prefer materials that slowly follow the body, while others look for an immediate response and greater freedom of movement.

SUPERfresh was created to meet this need, offering a more dynamic comfort sensation and a constant feeling of lightness throughout the entire rest experience.

The advantages SUPERfresh

- ✓ high elasticity and resilience
- ✓ immediate return to its original shape
- ✓ excellent breathability
- ✓ dynamic and responsive comfort
- ✓ reduction of humidity, thanks to open cells
- ✓ stability and durability over time
