

Welcomes. Supports. Regenerates.

MemoryLoving is the memory foam developed by Green Foam, designed to offer a perfect balance between support and comfort. Its compact structure and long-term shape stability ensure durability and consistent performance, accompanying the body in a natural and uniform way.

Today **MemoryLoving** evolves by integrating **BioCrystal**, one of the most advanced innovations in the comfort world.

The crystals used are natural elements with a highly stable and ordered structure. Integrated directly into the foam, they create a new interaction between material and body, adding a more advanced and perceptive dimension to comfort.

This technology represents a new frontier: the transition from passive comfort to a comfort that actively works with the body, enhancing perception and balance.

With a density of 45, MemoryLoving with BioCrystal is the evolved synthesis of structural support and active well-being.

BioCrystal: la nuova frontiera del comfort.

BioCrystal introduces a completely new way of experiencing comfort. It does not simply support the body but helps create the ideal conditions for its natural balance.

Thanks to their properties, the crystals promote continuous interaction with the body, transforming rest into an active moment of regeneration.

The resulting experience is concrete and perceptible:

- ✓ promotes deeper relaxation
- ✓ helps reduce accumulated stress
- ✓ supports physical energy recovery
- ✓ helps restore overall body balance

BioCrystal works constantly and naturally, without requiring any action, accompanying the body toward a new quality of well-being.

TECH STRIP

Density	Structure	Support	Shape retention	Comfort	Integrated technology
45 kg/m ³	Compact Memory Foam	High and progressive	High long-term stability	Enveloping and uniform	BioCrystal
